ENGLISH COMMUNICATION (Arts)**

Time: 3 Hours

Credits: 4

End Semester: 80 Marks

Mid Semester: 20 Marks

The purpose of this course is twofold: to train students in communication skills and to help develop in them a facility for communicative English.

Since language is which binds society together and serves as a crucial medium of interaction as well as interchange of ideas and thoughts, it is important that students develop a capacity for clear and effective communication, spoken and written, at a relatively young age. The need has become even more urgent in an era of globalization and the increasing social and cultural diversity that comes with it.

English, being a global language par excellence, it is important that any course in communication is tied to an English proficiency programme. The present course will seek to create academic and social English competencies in speaking, listening, arguing, enunciation, reading, writing and interpreting, grammar and usage, vocabulary, syntax, and rhetorical patterns.

Students, at the end of the course, should be able to unlock the communicator in them by using English appropriately and with confidence for further studies or in professional spheres where English is the indispensable tool of communication.

ANTHROPOLOGY

+3 FIRST YEAR FIRST SEMESTER

Core Course - I (C-1)

Time : 3 Hrs

End Semester Theory : 50 Marks

Credit : 06

Mid-Semester : 20 Marks

Introduction to Biological Anthropology

Unit-I: Meaning and definition of Physical Anthropology, history and development of Physical Anthropology and development of Modern Biological Anthropology. Aim, Scope and its relationship with allied disciplines. Different branches of biological anthropology with special reference to Human Genetics.

Unit-II : Organic Evolution : Meaning, concept and definition of Organic Evolution. Theories of organic evolution : Lamarkism and Neo-lamarkism. Darwinsim, synthetic theory and mutational theory of evolution.

Unit-III : Human Genetics : Meaning and definition, its aim and branches. Structure and function of an animal cell, cell theory, cell division (mitosis and meiosis). Human chromosomes and Karyotypes. Structure and function of DNA and RNA.

Unit-IV : Essentials of genetics, Landmarks in the history of genetics, Mendel's laws of Inheritance and its applications to man. Methods of studying human genetics pedigree and twin methods. Mode of inheritance of simple Mendelian traits in man (common baldness, chin fissure, mid-digital hair, PTC tasting). Autosomal inheritance in man : Dominant - Familial hyper cholestrolemia and poly dactyly. Recessive : Cystic fibrosis. sickle cell anaemia, thalassimia. Tay-Sach's disease, albinism. Sex linked inheritance in humans : X-linked dominant inheritance - Hypophosphatemia, X-linked recessive inheritance - DMD. Haemophilia, colour blindness, G6PD deficiency. Lesh-Nyhan Syndrome. Y-linked inheritance- Hairy ears.

Unit-V : Multiple alleles and inheritance of ABO&Rh blood group systems. Polygenic inheritance (Skin Colour and IQ). Chromosomal abnormalities in man : Down syndrome. Edward syndrome, Patau syndrome. Sex Chromosome abnormalities : Trisomy of X, XYY, XXY (Klinefelter syndrome and XO (Turner syndrome).

Suggested Readings

- 1) Fundamentals of Physical Anthropology by R.M. Sarkar
- 2) Outlines of Physical Anthropology by B.M. Das
- 3) Physical Anthropology and Human Genetics by B.R.K Sukla and Sudha Rastogi.
- 4) Essentials of Human Genetics by M.L. Kothari. LA. Mehta and S.S. Roy Choudhury.
- 5) Basic Human Genetic by E,L Mange and A.P Mange
- 6) Text book of Zoology by R.D. Vidyarthi

PRACTICAL

C-1

Time : 3 Hrs.

End. Sem. - 30 Marks

Practical: Somatometry of Head and Face (Total: 10 Subject)

- 1) Maximum head length
- 2) Maximum head breadth
- 3) Bigonial Breadth

- 4) Nasal Length
- 5) Nasal Breadth
- 6) Morphological facial height
- 7) Morphological upper facial height
- 8) Head circumference
- 9) Cephalic Index
- 10) Nasal Index

Somatometry (5 subjects)

- | | | | |
|---------------|-----------------|-----------------|-----------------|
| 1) Head form, | 2) Hair form, | 3) Facial form, | 4) Eye form, |
| 5) Nose form, | 6) Hair colour, | 7) Eye colour. | 8) Skin Colour. |

Suggested Readings

Anthropometry (For practical) by I.P. Singh and M.K. Bhasin.

ARCHAEOLOGICAL ANTHROPOLOGY

THEORY:

Unit-I: Introduction, Definition and scope of archaeological anthropology ; Relation with other disciplines. Methods of studying archeological anthropology,

Unit II : Methods of estimation of time and reconstruction of the past: Absolute dating method, (Radio carbon-14 dating (c-14), Potassium-Argon method, Dendro -chronology, Verve analysis) and Relative dating methods, (Paleontology, Statigraphy, Palynology, Fluorine analysis, mechanical and chemical weathering)

Unit-III : Geo-chronology of Pleistocene Epoch : Glaciations and inter-glaciation. Pluviation and inter-pluviation. Ice age and its causes.

Unit-IV : Understanding of culture : Basic concept of tools. Tool types and techniques of tool manufacture.

Unit-V : Meaning and classification of prehistoric culture.

PRACTICAL

C-3

Time : 3 Hrs.

End. Sem. - 30 Marks

Typo -technological analysis of ten prehistoric tools : Identification, interpretation and drawing of the tool types.

- 1) Core tool types
- 2) Flake tool types
- 3) Blade tool types
- 4) Microlithic tool types

- 5) Neolithic tool types

Suggested Reading :

- 1) Allchin and Allchin, 1993- The Rise of Civilisation in India and Pakistan, Cambridge University Press
- 2) Burkit M.C., 1962- The Old stone Age, Published by Rupa Co-Calcutta.

Fundamentals of Human Origin and Evolution

Unit-I: Classification and characteristics of living primates. Non human primates in relation to human evolution. Comparative anatomy and behaviour of human and non-human primates.

Unit-II : Primate origin and radiation with special reference to Miocene hominids: Ramapitheeus, its distribution, features and their phylogenetic relationship.

Unit-III : Australopithecines: Distribution, features and their phylogenetic relationship. Appearance of Genus Homo (Homo habilis) and related finds. Homo erectus of Asia, Europe and Africa : Distribution , features and their phylogentic status.

Unit-IV : The origin of Homo sapiens : Fossil evidences of Neanderthals and Archaic Homo sapiens.

Unit-V : Origin of modern humans (Homo sapien sapien): Distribution and features, Multi regional and out of Africa theory : Homnisation process.

Suggested Reading :

- 1) Buettener Janush : Origin of Man
- 2) R.M. Sarkar : Fundamentals of Physical Anthropology
- 3) B.M Das : Out fine of Physical Anthropology
- 4) Sukla and Rastogi : Physical Anthropology and Human genetics.
- 5) P.K. Ghose : Physical Anthropology

PRACTICAL C-4

Time : 3 Hrs.

End. Sem. - 30 Marks

Anatomy of skull and mandible. Detailed structure and identification of parts 'skill and mandible.

ranioinetry (10 craniums)

- 1) Maximum cranial length
- 2) Maximum cranial breadth
- 3) Bizygomatic breadth
- 4) Nasal breadth
- 5) Nasal lengtli
- 6) Cranial Index
- 7) Nasal Index

Mandibulometry (5 Mandibles)

1. Bi-Condylar breadth
2. Bi-gonial breadth
3. Length of lower jaw
4. Height of ramus
5. Mandibular angle.

ANTHROPOLOGY OF INDIA

Unit-I : Origin, history and development of Anthropology in India. Approaches to study Indian society and culture-traditional and contemporary. Racial and linguistic elements in Indian population. Understanding the diversity of Indian social structure-concept of Varna, Jati, Caste, Ashram or purusharatha. Gender hierarchies-their economic and cultural impact. Origin and evolution of social structures and their underlying philosophies. Contribution of contemporary biological, social and archaeological anthropologists in India.

Unit-II : Aspects of Indian Village-Social organization, agriculture and impact of market economy on villages. Tribal situation in India-biogenetic variability, linguistic and socio-economic characteristics. Problems of tribal peoples, land-alienation, indebtedness, lack of educational facilities, shifting cultivation, migration, forests and tribal unemployment, health and nutrition, tribal movement and quest for identity.

Unit-III : Development projects-tribal displacements and rehabilitation problems. Impact of culture contact, urbanization and industrialization on tribal and rural population. Basic concepts-Great tradition and little tradition, sacred complex, universalization and parochialization, sanskritization and westernization, dominant caste, tribe-caste: continuum, Nature-Man-Spirit complex.

Unit-IV : Problems of exploitation and deprivation of Scheduled Caste/Tribe and Other Backward Classes. Constitutional Provisions for the Scheduled Caste and Scheduled Tribes, Evaluation and Development of Indian Population. Human Rights, protection and enforcement of Human rights. Human rights of special category and marginal groups. Emerging trends of human rights with respect to terrorism, globalization and environment.

PRACTICAL

ANTHROPOLOGY OF RELIGION, POLITICS AND ECONOMY

Theory :

Unit-I : Anthropological approaches to understand religion- Animism, Animatism, totemism. Concept of Magic-witchcraft and sorcery. Differences between religion and magic. Religious specialist : Priest and Shaman.

Unit-II : Economic organization :

Nature and features of primitive economy. Different types of economy in simple society. Property and Inheritance : Various forms of economy of exchange barter trade and market. Differences between primitive and modern economy.

Unit-III : Political Institution :

Concept of power and authority, state and stateless society. Nature characteristic of primitive law. Difference between primitive law and modern law, Law in different tribal societies.

Unit-IV : Association and Institution :

Primitive Sodality : Dormitory, Characteritics of Dormitory and their functions. Age group and Age set.

Unit-V : Interrelationship between religion, magic and science.

Concept of Black magic and white magic. Emergence of new religion, religion conversion.

INTRODUCTORY MICRO ECONOMICS

COURSE DESCRIPTION

Module-I Exploring the subject matter of Economics :

Why study Economics ? The scope of Economics-Micro and Macro Economics, Positive and Normative Economics. The diverse fields of Economics. Economic Policy-the economic problems, scarcity and choice, production possibility frontier and opportunity costs, concept of economic growth and sources of growth. Economics Systems, Reading and working with graphs.

Module-II Supply and Demand :

The basic decision making units-House holds and firms-product and factor markets-the circular flow. Demand and supply-Schedules, curves. Laws of demand and supply- properties and determinants, shifts vrs. Individual demand and supply. Elasticity-price and demand elasticities-types of price elasticity of demand-its measurement and determinants-other elasticities-income, cross and supply. Consumers and producers surplus.

Module-III The Households :

Household choice in product markets-the budget constraint. The basis of choice : Utility, Diminishing marginal utility, Allocating income to maximize utility, derivation of demand curve. Description of preferences with indifference curves-it's properties, consumers optimum choice, Concepts of income, substitution and price effect. Households choice in input markets-labour supply and savings decision-choice between leisure and consumption.

Module-IV Production and Cost :

The production process-production function with one and two variable factors. Productivity curves isoquants, isocost lines. Returns to scale.

Short run costs and output decision—fixed, variable and total costs. Average and Marginal cost, Revenue-concepts comparing cost and revenue to maximize profit. Long run cost-envelope curve. Economics and diseconomies of scale.

Module-V Input Markets :

Labour and land markets-basic concepts Demand for inputs, productivity of an input, marginal productivity of labour-marginal revenue product. Labour market-Demand for labour-input demand curves, substitution and output effects of a change in factor price. Shifts in factor demand curves, competitive labour markets.

Land Market - Rent and value of output, firms profit maximizing conditions in input markets.

MATHEMATICAL METHODS FOR ECONOMICS PRELIMINARIES

- Module-I** Number System (Irrational number included), Sets and Set Operations, Cartesian Product, Relations-Functions-Types of functions and their properties, Equilibrium analysis in Economics, Meaning of equilibrium-Partial Market model equilibrium, General Market equilibrium Eqm in National Income analysis.
- Module-II** Limit of a function, Limit theorems, Continuity of functions, continuity and differentiability of a function, Derivative and slope of a curve, Rules of differentiation, Higher Order derivatives.
- Module-III Functions of two or more independent variables :**
Interpretation of 1st and 2nd order derivatives; curvature of a curve - concavity and convexity of functions. Applications of derivatives - Relationship between total, average and marginal functions.
- Module-IV Economic dynamics and Integral Calculus :**
Integration : Dynamics and Integration, Indefinite Integrals, Rules of integration - substitution, parts and partial fraction methods, Definite Integrals and properties of definite Integrals-Definite Integral as an area under curve, Economic application of Integrals—from marginal to total function, investment and Capital formation, Present value of a cash-flow, consumers and producers surplus.
- Module-V Matrices and determinants :**
Matrices, concept, types, Operations on matrices-Addition, Subtraction multiplication, transpose, Inverse, rank, Determinants-Concept, properties, solutions to a system of equations-Cramer's Rule and Matrix inversion method, Homogeneous equation systems, Application to Market and National Income Models.

INTRODUCTORY MACRO ECONOMICS

Course Description :

This Course aims at making the students understand the basic concepts of Macro conomics. Macro Economics deals with the aggregate economy. This course discusses the preliminary concepts associated with the determination and measurement of aggregate macroeconomic variables like savings, Investment, GDP, money and Inflation.

Module-I Basic Concepts :

Why study Macroeconomics ? Macro vs Micro Economics, Nature, Scope and limitation of macroeconomics. Stock and flow variables, Equilibrium and Disequilibrium, Partial and General Equilibrium Statics - Comparative statics and dynamics, national Income concepts-GDP, GNP, NDP at market price and factor cost; personal and disposable income; Real and Nominal GDP.

Module-II Measurement of Macroeconomic Variables :

Measurement of National Income - output, Income and Expenditure approaches. Difficulties in estimating National Income; National Income Identities in a simple 2- Sector Economy and with Government and foreign trade sectors. Circular flows of Income in 2, 3 and 4 sector National Income and Economic Welfare.

Module-III Money :

Definition and Functions of Money, value of Money and Index number of prices, quantity theory of money - cash transaction, cash Balance and Keynesian approaches.

Module-IV Inflation Deflation, depression and Stagflation :

Inflation - Meaning, causes, Demand pull and cost-push inflation, costs of Inflation and Anti-Inflationary measures, Classical, Keynesian Monetarists and Modern theories of Inflation; Deflation - Meaning, causes, costs and Anti-Deflationary Measures, depression and stagflation; inflation vs deflation.

Module-V Determination of National Income :

Theory of Determination of Income and Employment with and without savings and investment; Basics of Aggregate Demand, Aggregate supply and consumption, savings and investment functions; The Keynesian approach-Basics ADF, ASF and consumption, savings and investment functions: principles of effective demand. Income determination in a simple 2 - sector model; changes in aggregate demand and Income- the simple investment multiplier; Income determination in a 3-sector with the Government sector.

MATHEMATICAL METHODS FOR ECONOMICS

Course Description :

This course is the second part of a compulsory two-course Sequence. The objective of this sequence is to transmit the body of basic mathematics that enables the study of Economic* theory at the undergraduate level.

Module-I Higher Order derivatives :

Functions of two or more variables: Partial differentiation techniques; Higher order partial derivatives; application of partial derivative; Elasticity of a functions of two variables; demand and cost elasticity; cross and partial elasticity.

Module-II Differentials and total derivatives :

Total Differential and total derivatives, rules and uses of differentials; Derivatives of implicit functions, Application of total derivatives.

Module-III Single and Multivariable Optimisation :

Optimum and extreme values, Rules of maxima and minima for one and two variable functions. Relative maximum and minimum, Economic^ applications thereof. Point of inflexion, saddle point and concept of Hessian. Unconstrained profit, output, revenue and cost optimization.

Module-IV Optimisation with equality constraint :

Effects of a constraint function - Lagrangian method of constrained optimization (two variable, single constraint case only) Lagrangian multiplier, constrained utility, output and profit maximization, and cost minimization.

Module-V Linear Models :

Linear Programming - Basic concepts, basic theorems, primal and dual, Graphic solutions to LPP. Input-output model-simple static open model, concept of closed model, solution of a three industry static open model. Game theory - two person-zero-sum game, Pure and mixed strategies -saddle point solution.

MICRO ECONOMICS - 1

Course Description

The course is designed to provide a sound training in microeconomic theory to formally analyze the behaviours of individual agents. Since students are already familiar with the quantitative techniques in the previous semesters, mathematical tools are used to facilitate understanding of the basic concepts; this course looks at the behaviour of the consumer and the producer and also covers the behaviour of a competitive firm.

Course Outline

Module-I Consumer Theory I :

The market — Constructing a model; Optimisation and equilibrium; The budget constraint and budget set; Changes in budget line; Effect of taxes, subsidy and rationing on budget set; Consumer Preferences - Indifference curves; Case of perfect substitutes, Complements, neutrals, Satiation, discreet goods; The marginal rate of substitution; Utility - Cardinal utility; Constructing a utility function; Marginal utility and MRS; Optimal choice and consumer demand; Estimating Utility Functions; Implications of the MRS condition; Choosing taxes; Demand - Normal and inferior goods; income offer curve and Engel Curve; Ordinary goods and Giffen goods; The Offer Curve and the demand Curve; The inverse demand function.

Module-II Consumer Theory II :

Price, substitution and income effects sign of substitution effect Slutsky Equation. The Total Change in Demand; Rates of Change; The Law of Demand; Another Substitution Effect; Compensated Demand Curves; Consumer's Surplus - Demand for a discrete good; Constructing utility from demand; Other interpretations of consumer's surplus; Approximating continuous demand; Interpreting the change in consumer's surplus; Producer's surplus; Calculating gains and losses.

Module-III Production Theory:

Returns to Scale, Producers equilibrium, Ridge lines, Expansion path. Four simple production function (Linear, Fixed Proportions, Cobb-Duglas, CES), Technical Progress, Least cost combination of factors.

Module-IV Cost Functions:

Shift in Cost Curves, Production with two Outputs- Joint production: Economics of scale.

Module-V Profit Maximisation: The Nature and Behaviour of Firms, Profit Maximization, Marginal Revenue, Short-Run Supply by Price-Taking Firm, Profit Functions and its properties.

MACRO ECONOMICS -I

Course Description :

This course introduces the students to formal modeling of a macro economy in terms of analytical tools. It discusses various alternative theories of output and employment determination in a closed economy in the short run as well as medium run, and the role of policy in this context. It also introduces the students to various theoretical issues related to an economy.

Module I Consumption function :

Consumption Income relationship, propensities to consume and the fundamental psychological law of consumption : Implications of Keynesian consumption function; Factors influencing consumption function; Measures to raise consumption function; Absolute relative, Permanent and life-cycle hypothesis.

Module II Investment function :

Autonomous and Induced Investment, Residential Investment And Inventory Investment, Determinants Of Business Fixed Investment. Decision to invest and MEC, MEI Accelerator theory of Investment.

Module III Demand for and supply of money :

Demand for money - classical, Neo classical and Keynesian approaches, The Keynesian Liquidity trap and its Implication. Supply of money - classical and Keynesian approaches. High powered money and money multiplier. Components of money supply in India.

Module IV Aggregate Demand and Aggregate Supply :

Derivation of Aggregate demand and aggregate supply curves in the IS - LM frame work; Nature and shape of IS and LM curves; Interaction of IS and LM curves and determination of Employment, output, prices and Investment; changes in IS and LM curves and their implications for equilibrium.

Module V Inflation, Unemployment and Expectations, Trade Cycles :

Inflation - Un employment trade off and the Phillips curve short run and Long run analysis, meaning and characteristics of trade cycles; Hawtrey's monetary theory, Hayek's over investment theory, Keynes views on trade cycles.

STATISTICAL METHODS FOR ECONOMICS

Course Description

This is a course on statistical methods for economics. It begins with some basic concepts and terminology that are fundamental to statistical analysis and inference. It then develops the notion of probability, followed by probability distributions of discrete and continuous random variables and of joint distributions. This is followed by a discussion on sampling techniques used to collect survey data. The course introduces the notion of sampling distributions that act as a bridge between probability theory and statistical inference. The semester concludes with some topics in statistical inference that include point and interval estimation.

Module-I Data Collection and measures of central tendency and dispersion :

Basic concepts : population and sample, parameter and statistic; Data Collection; primary and secondary data, methods of collection of primary data; Presentation of Data; frequency distribution; cumulative frequency; graphic and diagrammatic representation of data; Measures of Central Tendency: mean, median, mode, geometric mean, harmonic mean, their relative merits and demerits; Measures of Dispersion : absolute and relative - range, mean deviation, standard deviation, coefficient of variation, quartile deviation, their merits and demerits; Measures of skewness and kurtosis.

Module-II Correlation Analysis :

Correlation : scatter diagram, sample correlation coefficient - Karl Pearson's correlation coefficient and its properties, probable error of correlation coefficient, Spearman's rank correlation coefficient, partial and multiple correlation.

Module-III Regression Analysis :

Two-variable linear regression analysis — estimation of regression lines (Least square method) and regression coefficients their interpretation and properties, standard error of estimate.

Module-IV Time Series and Index Number :

Time Series : definition and components, measurement of trend - free hand method, methods of semi-average, moving average and method of least squares (equations of first and second degree only), measurement of seasonal component; Index Numbers : Concept, price relative, quantity relative and value relative; Laspeyres's and Fisher's index, family budget method, problems in construction and limitations of index numbers, test for ideal index number.

Module-V Probability theory :

Probability : Basic concepts, addition and multiplication rules, Random variable and their probability distribution; Mathematical expectations properties, Theoretical Distribution : Binomial, Poisson normal distributions - Properties and uses.

MICRO ECONOMICS - II

Course Description:

This course is a sequel to micro economics I. The emphasis will be on giving conceptual clarity to the student coupled with the use of mathematical tools and reasoning. It covers market, imperfect markets. Welfare economics and topics under information economics.

Module-I Firms supply and Equilibrium :

Market Environments, Pure competition, Supply decision of a competitive firm and expectations; Inverse supply function: profits and producers surplus: Long-run supply curve of a firm; short run and long run Industry supply; Industry equilibrium in short and long run; Meaning of zero profits; Economic Rent.

Module-II Monopoly and Monopolistic Competition :

Barriers to Entry, Profit maximisation and output choice, monopoly and resource allocation, monopoly product quality and durability. Price-discrimination. Degrees, possibility and profitability, equilibrium under price discrimination; monopolistic competition, equilibrium of a firm under monopolistic competition in the short and long-run. Excess capacity.

Module-III Oligopoly :

Oligopoly - Choosing a strategy, Quantity leadership - problems of the follower and the leader; price - leadership, comparing quantity leadership and price leadership; simultaneous quantity setting; example of Cournot equilibrium, simultaneous price-setting; collusion.

Module-IV Welfare Economics :

Positive and normative approaches to Economics, individual and Social Welfare, Value Judgements. Pigovian and Monshallian approaches to welfare economics. Pareto optimality conditions in consumption, production and composition of products. Welfare maximisation and perfect competition.

Module-V Game theory :

The payoff matrix of a Game; Nash equilibrium; mixed strategies; The Prisoner's Dilemma; Repeated Games; Enforcing a cartel; Sequential Games, a Game of Entry deterrence.

MACRO ECONOMICS

Course Description:

This course is a sequel to macro economics I. In this course, the students are introduced to the long run dynamic issues like growth and technical progress. It also provides the micro foundation to the various aggregative concepts used in the previous course.

Module-I The Extended IS-LM Model :

The goods market and the money market. Two market equilibrium - the goods and money markets, changes in the two market equilibrium, Government spending, taxation and two market equilibrium. The Is and Ln elasticity's and monetary - Fiscal policies.

Module-II Open Economics Macro economics :

Balance of payments - concept, equilibrium and dis-equilibrium, Measures to correct dis-equilibrium. Determination of foreign Exchange rate - the PPP theory and its implications, Fixed vs Flexible Exchange rates. The short-run open economy model, the basic mundell-Fleming model, International Financial markets.

Module-III Exchange rates :

Nominal and real exchange rates. The real exchange rates and the trade balance, the determinants of the real exchange rate, policies influencing the real exchange rates — fiscal policy at home, fiscal policy abroad, shifts in investment demand, the effects of trade policies. The determinants of the nominal exchange rate.

Module-IV Macro economic policy :

The budget and automatic fiscal stabilizers. The doctrine of balanced budget and Keynesian objections; Concept Deficit in budget, Revenue and Fiscal Deficits, Fiscal Policy. Objectives and Limits to Discretionary policy. The crowding-out hypothesis Objectives of Monetary policy, Instruments of Monetary policy, the transmission mechanism of monetary policy, Rules vs. Discretion in monetary policy, Implications of targeting the Interest rate.

Module-V Schools and Fundamentals of Macro economic theory and policy

Classics, Keynes, Monetarist, New classical and New Keynesians -

- (i) Keynes vs. the classics Aggregate demand and Aggregate supply, underemployment equilibrium and wage price Flexibility.
- (ii) Friedman's reformulation of quantity theory of, policy Fiscal vs. monetary policy
- (iii) The new classical view of macro economics Rational expectations approach.

PUBLIC ECONOMICS

Course Description

Public economics is the study of Govt. policy from the points of view of economic efficiency and equity. The paper deals with the nature of government intervention and its implications for allocation, distribution and stabilization besides a host of topics including public goods, market failures and externalities.

Module-I Introduction to public finance :

Public Finance, meaning and scope, Distinction between public and private finance; Public vs private goods, Merit goods, Principles of Maximum Social Advantage; Market failure, Externalities and role of government.

EDUCATION AND SOCIETY

INTRODUCTION

Education is a sub-system of the society. The aims of education are determined by the aims of the society. The relationships between the two concepts i.e., education and society are so strong that it is not possible to separate them because what happens to one affects the other. It is impossible to think purposefully about many contemporary problems and issues of education without thinking about the society. Educational institutions are micro-societies, which reflect the entire society. The education system in any given society prepares the child for future life and instils in him those skills that will enable him to live a useful life and contribute to the development of the society. Education as a social phenomenon does not take place in a vacuum or isolation; it takes place in the society. This paper will deal with the functioning of education vis-a-vis the society. Education as a sub-system of society and how other sub-systems affect education will be discussed. Various agencies which are involved towards promotion of education will be discussed at length. Special emphasis is placed on issues relating to equality of educational opportunity with specific reference to the Scheduled Castes/Tribes and women. Special attention is also given how education plays an important role towards social change, national integration and international understanding in a diverse social context.

Course Objectives

After completion of this paper, students shall be able to:

- justify education as a social process and explain its function.
- describe the aims of education from sociological perspective.
- list various agencies of education and their function.
- justify education as a sub-system of society and how other sub-systems affect education;

Educational Psychology plays a pivotal role in understanding Child's unique character in teaching learning process. No child is alike from physical, psychological, and social point of view. So a classroom teacher must understand unique characteristics of children and the factors affecting children's learning. This course will enable the learners to understand the Childs' innate potentialities and apply educational psychology in teaching learning process.

Course Objectives:

After completion of this paper, students shall be able to:

- establish relationship between education and psychology.
- understand various methods used to study individual behaviour.
- explain the application of educational psychology in teaching learning process.
- understand individual difference from intelligence, creativity, and personality point of view
- explain the concept of learning and factors affecting learning.
- reflect the contribution of various learning theories in teaching learning process.
- Explain different category of people from different Personality type and the type of adjustment.

Unit -1**Educational Psychology**

- Relationship between education and psychology
- Meaning, Nature and scope of educational psychology
- Relevance of educational psychology for teacher
- Methods of studying learner behaviour: Survey, observation, case study and experimental

Unit - 2**Developmental psychology**

- Concept
- Difference between growth and development
- Principles of development
- Areas of development : Physical, social, emotional and intellectual during childhood and adolescence
- Piagetian stages of cognitive development

Unit - 3**Intelligence, creativity and individual difference**

- Meaning and nature of intelligence
- Theories: Uni-factor, two-factor, multiple factor, Gardner's theory of Multiple Intelligence.
- Measurement of intelligence : individual and group tests, verbal, non-verbal and performance test.
- Individual difference: concept, nature factors and Role of Education
- Creativity: Meaning, Nature and Stages of creative thinking Assessing and nurturing creativity.

Unit - 4**Learning and motivation**

- Learning: Meaning nature and factor
- Theories of learning with experiment and educational implications: Trial and error with focus on laws of learning classical conditioning, operant conditioning and insightful learning and constructivist approach to learning.
- Motivation: concept, types and technique of motivation.

Personality and Mental Health

- Personality: Meaning and nature
- Assessment: Subjective, objective and projective techniques.
- Mental Health: Concept, factor affecting mental health and role of teacher.
- Mental Health of teachers
- Adjustment mechanism

PEDAGOGICAL SKILLS

INTRODUCTION

It is important to note that 'education' is not synonymous with 'school'. It has always been the case that a range of activities that are educational in nature can, indeed should, occur outside the school, even from the earliest age given the educative role of the parents. The Delors Commission Report on education for the 21 st century proposed 'learning to live together' as one of the four pillars of education.

It advocates learning to live together by developing an understanding of other people and an appreciation of interdependence - carrying out joint projects and learning to manage conflicts in a spirit of respect for the values of pluralism, mutual understanding and peace (UNESCO, 1996). The policy context in India and around the globe is moving towards recognition of the educational value of newer form of pedagogy in the 21 st Century which will enable the children to develop critical reasoning power, justify their views, independent decision making power, expression of thoughts, and empathy to others' feelings. Recently NCERT (2005) and NCTE (2009) have changed their curriculum framework and accordingly revised their text books and teacher orientation process to empower the prospective teachers to cope up with emerging pedagogies and to promote higher order learning of the learners like, creative expression, authenticity, abstraction of ideas, and multiple thinking, etc. This paper is intended to give insight to the students on importance of pedagogy in education.

Course objectives

After completion of the course, the students shall be able to:

- explain the concept of pedagogy;
- differentiate pedagogy from other allied concepts;
- define different type of task of teaching
- establish relationship between teaching and learning;
- list out different approaches and methods of teaching;

Unit-I

Concept of teaching -learning

- Meaning and definitions of teaching
- Characteristics and importance of teaching
- Meaning and definition of learning.
- Relationship between teaching and learning.

Unit- 2

Task of teaching

- Meaning and definition of teaching task
- Variables involved in a teaching task: Independent Dependent and intervening variable.
- Phases of teaching task Pre-active, interactive and post - active phase.
- Level of teaching task: Memory Understanding and reflective level.
- Lesson plan design The Herbartian steps, 5E Model ICON Design Model.

Unit- 3

Theories of teaching

- Meaning and Nature of Theory of teaching
- Types of Teaching Theories.
- Formal: Communication theory,
- Descriptive: Gagne's hierarchical theory
- Normative: Theories of Mitra and Clarke

Unit-4

Principles and Maxims of Teaching

- General principles teaching
-

- Psychological principles of teaching
- Maxims of teaching

Unit- 5

Approaches and Methods of Teaching

- Inductive - Deductive, Analytic - synthetic, Problem
- Solving and Project method.
- Shift in focus from teaching to learning - constructivist approach
- Activity based and child centered approach - concept and elements.

TECHNOLOGY AND INNOVATIONS IN EDUCATION

INTRODUCTION

Educational technology (ET) is the efficient organization of any learning system adapting or adopting methods, processes, and products to serve identified educational goals (NCERT, 2006). This involves systematic identification of the goals of education, recognition of the diversity of learners' needs, the contexts in which learning will take place, and the range of provisions needed for each of these. Our schools should move from a predetermined set of outcomes and skill sets to one that enables students to develop explanatory reasoning and other higher-order skills. Educational technology is a powerful tool towards developing such reasoning and skills. It should enable students to access sources of knowledge, interpret them and create knowledge rather than be passive users. It should enable the teachers to promote flexible models of curriculum transaction. It should encourage to use flexible curriculum content and flexible models of evaluation as well. Present paper will give an exposure to students to understand the meaning, nature and scope of educational technology. They will be sufficiently oriented about nuances of communication and their implications in educational context. They will understand the underlying principles of instructional design. Students will develop the ability to prepare lesson plans based on constructivist approach. They will be oriented about the need and importance of distance education in India.

Course Objectives

On completion of this course, the students will be able to:

- understand the meaning, nature and scope of educational technology
- explain with examples various approaches to educational technology
- describe system approach and its application in educational context
- explain the concepts, principles, modes, process and barriers of communication and their implications in educational context
- explain the instructional design and its underlying principles
- describe different models of teaching and their use in effective classroom teaching

Unit – 1 Educational Technology

Meaning, nature and scope

Approaches to Educational Technology : Hardware, software and system approach

Types of Educational Technology

Importance of Educational Technology for the teacher and the student.

Unit – 2 Communication Process

Meaning and nature

Process, components and types

Barriers of communication

Study of Classroom Communication through flander's interaction analysis.

Unit – 3 Innovations in Educational Technology

Programmed instruction : Concept, Basic principles and applications

Microteaching : Concept, assumptions, phases and applications.

Simulated Teaching : concept, procedure and applications

Personalized system of instruction : Concept, objectives, strategies and applications

Unit – 4 **Teaching Models**

Concept attainment model

Advance organizer model

Synetics model

Inductive model

Memory model

PEDAGOGY OF SCHOOL SUBJECTS

(Each student is required to select any one of the following school subjects)

METHODS OF TEACHING ODIA

Introduction

Mother-tongue plays a significant role in the education of a child. It has a great importance in the field of education. Therefore, mother tongue must be given an important and prominent place in the school curriculum. Method of teaching Odia will enable us to preserve and enrich our language and culture forever by developing Odia language skills among learners. The learners will also be equipped with the skills to prepare Odia lesson plans by using constructivist approach.

Learning Objectives and Expected Outcomes

On completion of the course the students shall be able to:

- describe the concept of Mother Tongue;
- explain the semantic peculiarity of Odia language
- justify the importance and objectives of teaching Mother Tongue (Odia) at Secondary Stage;
- describe various pedagogical approaches of language teaching.
- prepare subject specific lesson plan for improvement of language skills.
- plan and construct test to assess language skills and content areas.

Unit –1 Conceptual

- Importance of mother tongue in the life and education of the child
- Aims and objectives of teaching mother tongue at school level.
- Place of mother tongue in the school curriculum.

- describe English as a second language in the multi lingual syllabus India
- List out different techniques of teaching
- Discuss different type of teaching learning materials in teaching English
- Prepare lesson plan in English

Unit – 1 Teaching / Learning English as a second language

- Importance of learning English as a second language
- Aims and objectives of teaching English
- Place of English in school curriculum

Unit – 2 Methods and approaches

- Translation and Direct methods
- Structural approach to teaching English
- Communicative approach to learning English

Unit – 3 Techniques of teaching

- Teaching prose and poetry
- Teaching grammar
- Teaching composition

Unit – 4 Teaching learning materials for teaching English

- Teaching aids : purpose types and use
- The English test book and work book
- The language laboratory
- Application of ICT in teaching English

Unit – 5 Developing a lesson plan for teaching English

- Herbartian approach
- 5 E Model
- ICON Design Model

METHODS OF TEACHING MATHEMATICS

INTRODUCTION

Mathematics is closely linked not only with the daily life of the human society but also with scientific and technological world. Therefore, teaching of mathematics has formed, since the advent of education in human history, one of the three 'R's of learning. To be effective in teaching and creating a constructive learning situation, the teacher should not only have the content knowledge of mathematics, but also the pedagogical knowledge and its values in daily life of the human being. The pedagogical knowledge of mathematics will help the learner to effectively transact the mathematical concept and apply the effective strategy to assess the learner.

Course Objectives

On completion of the course the students shall be able to:

- explain the nature and scope of mathematics
- identify different types of proof in mathematics and their application to solving mathematical problems
- relate the mathematical concepts with other school subjects
- achieve the mastery over the methods, strategy and approaches for transacting the contents of mathematics
- develop mathematics achievement test and acquire of the scoring procedure
- analyze learners learning difficulties and develop remedial strategies to meets needs of slow learners and to develop enrichment materials for the advanced learners

Unit – 1 Importance and values of teaching mathematics

- Aims and objectives of teaching mathematics
- Relationship of mathematics with other school subjects.

Unit – 2 Mathematics curriculum and its organization at school stage.

- Principles of curriculum construction in Mathematics
- Principles of Arranging / organizing curriculum
- Pedagogical analysis of content in School Mathematics

Unit – 3 Methods of teaching mathematics

- Analytic and synthetic methods
- Inductive and deductive methods
- Project method

Unit – 4 Teaching learning Materials in Mathematics

- Teaching aids in mathematics : Purpose, types and use.
- Mathematics text book and workbook.
- Application of ICT in teaching mathematics.

Unit – 5 Developing lesson plan for teaching mathematics.

- Herbartian approach
- 5 E Model
- ICON Design Model.

METHOD OF TEACHING HISTORY**INTRODUCTION**

History occupies an important place in the school curriculum. Through History students will be aware of the past events and developments. History creates linkage between present and past. Through the subject our students will respect our culture, traditions and heritage. History shows path to future.

COURSE OBJECTIVES:

On completion of the course, students shall be able to:

- explain the meaning and scope of History
 - relate History with other school subjects
 - explain the different approaches to organization of contents in History
 - achieve mastery over different methods and approaches for curriculum transaction
 - List out the different types of teaching learning materials in history and explain their importance.

METHOD OF TEACHING SCIENCE

Introduction

The paper is meant for the students joining Masters Level with B.S background. The paper intends to develop an insight among the students regarding science as a distinct discipline with its characteristics and method of inquiry. The MA (Education) students pursuing science would focus both a s physical and biological science and acquaint themselves with different methods and models of teaching. The methods, models and materials would be discussed with reference to the content of course prescribed for H.S.C examination in science. The students, on completion of course, are expected to develop scientific thinking, adapt methods and materials to the needs of students and conduct assignments in line with constructivist perspective.

Learning Objectives and Expected Outcomes

On completion of the course the students shall be able to

- gain insight on the meaning nature, scope and objective of science education.
- appreciate science as a dynamic body of knowledge
- appreciate the fact that every child possesses curiosity about his natural

- surroundings
- identify and relate everyday experiences with learning science
- appreciate various approaches of teaching learning of science
- employ various techniques for learning science
- use different activities like demonstration ,laboratory experiences, observation, exploration for learning of science
- facilitate development of scientific attitudes in learner
- Construct appropriate assessment tools for evaluating science learning

Unit – 1 Conceptual

- Meaning, nature and scope of General Science
- Aims and objectives of teaching science at school level.
- Correlation of science with other school subjects.
- Importance of science in the school curriculum

Unit – 2 Methods and approaches

- Observation method
- Demonstration-cum-Discussion method
- Project method
- Heuristic method
- Laboratory method

Unit – 3 Science curriculum

- Principles of curriculum construction in science

METHOD OF TEACHING GEOGRAPHY

INTRODUCTION

Geography as a subject play a vital role in the school Curriculum for many people, Geography means knowing where places are and something of their characteristics is important for reading or the multiplication of tables for arithmetic, but Geography involves far more. Geography is the study of places on earth and their relationship with each other. Often the study of Geography begins with one's home community and expands as person gains greater experience. Thus Geography provides a conceptual link for children between home, school and the world beyond. Geographers study how people enteract with the environment and with each other from place to place and they classify the earth into regions. It helps us to be better citizen.

Course Objectives:

On completion of the course ,students shall be able to:

- explain the meaning and scope of Geography.
- relate Geography with other school subjects
- explain the different approaches of curriculum transaction in Geography.
- list out the different type of Teaching Learning Material (TLM) in Geography
- explain the principles of curriculum organization in Geography.
- Prepare lesson plan in teaching Geography.

Unit – 1 Conceptual

- Meaning, nature and scope of Geography
- Aims and objectives of teaching Geography at the school level.
- Correlation of Geography with other school subjects.
- Place of Geography in the school curriculum.

Unit – 2 Methods and approaches

- Direct observation and indirect observation

STATISTICS IN EDUCATION

INTRODUCTION

The fundamental principles and techniques of statistics provide a firm foundation to all those who are pursuing courses in education, psychology and sociology. The role of statistics is essential for collection, analysis, grouping and interpreting the quantitative data. Research and innovations are very essential in the field of education for enrichment, progress and development of the knowledge society. A lot of surveys and research works are carried out in the field of education. Statistical methods help the researchers in carrying out these researches successfully. Therefore, the basic knowledge of statistical method is very vital for conducting any survey, research and project work. Students at undergraduate level must have to develop the basic knowledge of statistical methods used in education.

Course Objectives

After completion of this course students shall be able to:

- Describe the importance of statistics in field of education
- Convey the essential characteristics of a set of data by representing in tabular and graphical forms.
- Compute relevant measures of average and measures of variation

- Spell out the characteristics of normal probability of distribution
- Examine relationship between and among different types of variables of a research study

Unit – 1 Concept of Statistics

- Meaning, Definition and characteristics of statistics
- Kinds of statistics
- Types of Data
- Scales of Measurement
- Frequency Distribution

Unit – 2 Graphical Representation of Data

- Histogram
- Frequency Polygon
- Pie-Diagram
- Cumulative frequency graph
- Cumulative percentage curve / Ogive

Unit – 3 Measures of Central Tendency and Dispersion:

- Mean
- Median
- Mode
- Range
- Average Deviation
- Quartile Deviation
- Standard Deviation

Unit – 4 Measures of Correlation

- Concept of Correlation
- Linear and Non-linear correlation
- Rank difference method of correlation
- Product moment correlational method

Unit – 5 Inferential Statistics

- Normal Probability curve – Divergence from Normality
- Chi-square test
- t-test

CURRICULUM DEVELOPMENT & EDUCATIONAL GUIDANCE

INTRODUCTION

The organization of schooling and further education has long been associated with the idea of a curriculum. But what actually is curriculum, and how might it be conceptualized? We explore theory and practice of curriculum design and its relation to informal education. Curriculum theory and practice to some must sound like a dull but required course activity. Curriculum theory at its best is a challenging and exciting intellectual puzzle. It is a vibrant field full of contradictions, challenges, uncertainties and directions. Yet it is a critical field, the outcome of which does matter. When we teach, whether from preschool to high school; from children to adult, whether educating or training, what we do must make a difference. We cannot waste our audience time with training that doesn't help, with educating that doesn't educate, or teaching that which may be irrelevant or even wrong. If a surgeon makes a mistake, his patient dies. If teachers, educators, professors, trainers make a mistake, we do not readily see the consequences, and indeed may never see the consequences. Ask yourself: Have you hurt anyone lately by giving misinformation? Did you really make a difference in your teaching, say yesterday? How do you know? Does the curriculum that you help design and deliver really do the job it is supposed to? This course deals with the theory and practice of curriculum design. Participants will want to ask "How do I do curriculum design?" "What are the theoretical underlyings which inform the practical problems of making curriculum?" For this course, however, the underlying theoretical foundations which inform how and what one does will bias our discussions into particular directions. Students need Guidance in different ways and in

various forms to solve their problem. Educational guidance is helpful for all categories of learner. There are different services available to provide guidance to students. The present paper emphasizes the study of various concepts of guidance and counseling and its importance in teaching learning process.

Course Objectives:

On completion of this course, the students shall be able to:

- define and explain the concept of curriculum.
- list out different types of curriculum with examples.
- suggest bases of curriculum such as, philosophical, psychological and sociological.
- describe different considerations for curriculum planning;
- elucidate different process of curriculum development;
- explain the role of teacher in curriculum development.
- identify major issues and trends in curriculum;
- Explain National curricular Framework (2005)
- Explain different type of Guidance & Counselling
- List out different type of counseling services and the role of teacher in organizing those services

Unit – 1 Curriculum

- Meaning and importance
- Types of Curriculum : subject centered, learner centered, experience centered curriculum, Core curriculum, Local specific curriculum.
- Components of curriculum : Objectives, Content, Learning experience & Evaluation

Unit – 2 Bases of curriculum

- Philosophical, Sociological & Psychological bases of curriculum,
- Principles of curriculum construction:
 - o Principles of Activity centredness, Community centeredness
 - o Integration, Relevance, Balance, Flexibility, Variety & Plurality, Forward looking, contextuality, ICT – enabled

Unit – 3 National Curricular Framework (NCF) 2005

- Guiding Principles
- Learning & knowledge
- Curricular areas, School Stages & Assessment

Unit – 4 Guidance and counseling

- Guidance : Meaning, Nature and scope
- Types of guidance : Educational, Vocational, & Personal
- Counseling : Meaning, nature & Scope
- Different types of counseling
- Techniques of counseling

Unit – 5 Organisation of Guidance services in school

- Placement service
- Occupational information service
- Pupil inventory service

- Follow up service
- Role of teacher in organizing guidance services in school

EDUCATIONAL ASSESSMENT & EVALUATION

INTRODUCTION

Assessment is considered to be one of the most crucial aspects of any teaching learning process, as it helps the teacher to record the growth of their students, planning for instructional strategy and most importantly helps to assess their own growth over the years. An effective method of assessment in the classroom helps to create conducive learning environment and a teacher must have to know different techniques of assessment which may improve students' learning. The key issues that involve in assessment are how to assess, when to assess, and what will be its implications on students learning. The paper outlines the above mentioned questions and different issues that involves in assessment.

Course Objectives

After completion of the course ,students shall be able to:

- describe the role of assessment in education.
- differentiate measurement, assessment and evaluation.
- establish the relationship among measurement, assessment and evaluation.
- explain different forms of assessment that aid student learning.
- use wide range of assessment tools and techniques and construct these appropriately.
- classify educational objectives in terms of specific behavioral form
- prepare a good achievement test on any school subject
- explain the characteristics of good measuring instruments.
- list out different type of assessment techniques

Unit – 1 Assessment & Evaluation in Education

- Understanding the meaning of Test, Measurement Evaluation and Assessment
- Scales of Measurement
- Types of measurement, Norm Referenced and Criterion Referenced
- Procedure of Evaluation: Placement, Formative, Diagnostic and Summative
- Concept of continuous and comprehensive evaluation (CCE).

Unit – 2 Instructional Objectives

- Taxonomy of Educational objectives with special reference to cognitive domain
- Methods of stating instructional objectives: General instructional objectives and specific learning outcomes.
- Relationship of Evaluation procedure with objectives.
- Construction of objective based and objective type test items: Essay type, Objective type: principles of construction, Advantages and limitations.

Unit – 3 Techniques of Assessment

- Observation
 - Interview
 - Rating scale
 - Checklist
 - Project
 - Concept Mapping
-

(Above techniques are to be discussed with reference to purpose, type, procedure of administration and application)

Unit – 4 Test construction

- Teacher made test vs. standardized test.
- General Principles of Test construction and standardization : Planning, Preparing, Tryingout & Evaluating.

Unit – 5 Characteristics of a Good Test

- Reliability - Concept and method
- Validity - Concept, type and methods of validation
- Objectivity - Concept, type and factors
- Usability - Concept and factors

INTRODUCTION TO EDUCATIONAL RESEARCH

INTRODUCTION

Research is a creative work undertaken systematically to increase the stock of knowledge, including knowledge of humanity, culture and society, and the use of this stock of knowledge to devise new applications. It is used to establish or confirm facts, reaffirm the results of previous work, solve new or existing problems, support theorems, or develop new theories. A research project may also be an expansion on past work in the field. The primary purposes of research are documentation, discovery, interpretation, or the research and development of methods and systems for the advancement of human knowledge. Approaches to research depend on epistemologies, which vary considerably both within and between humanities and sciences. In the present paper, students will be given an orientation about the nature, purpose, scope of research in education. A brief overview of different types of research in education will be given to the students. Students will be exposed to different methodology of research in education. Students can use appropriate tools and techniques for the collection of data and understand concept of sampling.

Course Objectives

On completion of this course the students shall be able to:

- Describe the nature, purpose, scope of research in education
- Identify types of research in education
- Explain the characteristic of qualitative, quantitative and mixed research
- Select and explain an appropriate method for a research study
- Select appropriate tools and techniques for the collection of data
- Describe the procedure of preparation of Research Report

Unit – 1 Introduction to Research

- Methods of Acquiring knowledge
- The Nature of science
- Meaning and characteristics of research
- Basic, Applied and action research
- The nature of educational research

Unit – 2 Types of studies in Educational Research

- Descriptive Research
- Experimental Research
- Qualitative Research
- Philosophical and Historical studies

Unit – 3 Research Design

- Identification of problem and formulation of Research question
- Hypothesis : Meaning and types
- Sampling : Concept and purpose
- Tools of data collection : Questionnaire, Rating scale, Attitude scale and checklist

- Techniques of data collection : Interview and observation

Unit – 4 **Data Analysis and Interpretation**

- Analysis of Quantitative Data (Descriptive statistical Measure)
- Analysis of Quantitative Data (inferential statistics based on parametric tests)
- Analysis of Quantitative Data (inferential statistics based on non-parametric tests)
- Analysis of Qualitative Data

Unit – 5 **Research reports and application**

- Writing proposal / synopsis
- Method of literature survey / Review
- Research Reports various components or structure
- Scheme of chapterization and Referencing

COMPARATIVE EDUCATION

INTRODUCTION

This paper is an introduction to a systematic study of comparative education, the analytical survey of foreign educational systems. Comparative education is relatively a young sub field in the very old discipline of pedagogy. Educational reforms are so intimately connected with politics, with problems of race, nationality, language and religious and social ideals that it becomes rather imperative to have a glimpse over the evolution of educational development of nations. This course is an attempt to combine the two purposes : an academic insight and a general introduction into comparative education as a study of contemporary solutions to various countries. It is widely recognized that this intending students of education should have some knowledge of foreign educational systems and their comparative merits. This paper also aims at the analytical study of education in all countries with a view to perfecting national systems with modification and changes, which the circumstances and local conditions would demand.

Course objectives

On completion of this course ,students shall be able to:

- Explain the scope of comparative education
- List out the factors of comparative education

Unit – 1 Definition and scope of Comparative Education

- First pioneers of comparative education.
- Other subsequent comparative studies
- Approaches : statistical, psychological and historical
- National traditions and the definition of a nation.

Unit – 2 Theory and Methods of comparative Education

- Purpose of comparative education
- Area studies : Description and interpretation
- Comparative studies : Juxtaposition and comparison

Unit – 3 Factors

- The Racial factor
- The Linguistic factor
- Geographic and economic factor
- Religious factor

Unit – 4 Systems of Education

(Characteristic, structure, curriculum and evaluation system)

- U.K.
- U.S.A.

Unit – 5 Systems of Education

ICT IN EDUCATION

INTRODUCTION

Information and Communication Technology (ICT) now hold great potential for increasing the access to information as well as a means of promoting learning. ICT has tremendous potentiality in transforming classrooms into more engaging, collaborative and productive learning environments in which instructions can be customized to students'

specific needs, interests and learning styles. It is also redefining the way educators teach as well as the way the students learn. The present paper is based on above assumptions. The paper will orient the learners about the need and importance of ICT in education. It will describe about the importance of open source software in education particularly, in developing country like, India. Students will be given an exposure to the various approaches and stages towards the use of ICT in education. Students are expected to develop reasonably good ICT skills in terms of use of various computer software and ICT tools.

Course Objectives

On completion of this course, the students shall be able to:

- explain the concept, nature and scope of ICT in education
- differentiate Web. 1.0 and Web 2.0
- describe the importance of open source software in education
- list and explain various approaches in adoption and use of ICT in education.
- list and explain various stages of ICT usages in general and pedagogical usages in particular in education.
- describe the needed teacher competencies for ICT usage in the classroom.
- demonstrate the use of various computer software such as Word-processing , Spreadsheets, and Presentation.

Unit – 1 Information & Communication Technology : Meaning and importance

- The ICT infrastructure : computers, telecommunication network, networking.
- Introduction to internet, the World Wide Web, e-mail, and social media.
- ICT potential for improving access, quality and inclusion in education

Unit – 2 E- learning : meaning and importance

E – learning methods and media :

- Virtual learning environment
- Virtual universities
- Massive Open Online Course (MOOCs)
- Webinars
- Special internet forum / discussion groups
- e-tutorials

Unit – 3 ICT Resources

- Open Educational Resources (OERs) purpose and importance
- e-Libraries, e-books, e-journals, Infflibnet
- Important website for education : NCERT, UGC, NCTE, MHRD, DHE, UNESCO, UNICEF, UIS (UNESCO Institute of Statistics) etc.
- Other learning resources: Encyclopedia, dictionaries, multimedia etc.

Unit – 4 ICT in class room

- Purpose and importance of ICT in class room
- ICT enabled curriculum : enhancing ICT use in the existing curriculum
- Full integration of ICT into curriculum
- Designing / Developing ICT integrated smart classrooms: hardware and software requirements, utilization procedures
- Developing multimedia and ICT based lessons.

Unit – 5 ICT for school improvement

- ICT for competency standards and professional development of teachers
- ICT for school administration

- ICT for student support services : admission libraries, guidance, maintenance of student records etc.
- ICT enabled assessment
- ICT for open and distance learning
- ICT for life long learning

SPECIAL EDUCATION

INTRODUCTION

Nature and nurture have a substantial role to play in growth and development of human beings. Nature and nurture apart, human organism is susceptible to damage through disease and injury. Disease, accident, genetic causes or any other reason, which inflicts the persons, causing loss or want of abilities, may not be equal in all cases. Accordingly the degree of abilities or lack of abilities varies. Deviations from average of

physical and mental ability of human beings beyond limits resulting in substantial and appreciable difficulties in performing a function or in social adjustment process be perceived as disability. Some of the practitioners understand rehabilitation as a graded acquestrial individualized approach in which charity has given way to right so far as the empowerment of persons with disability is concerned. Education is the means to empower them. It has become a fundamental right of every child. The evolution of education of persons with disability has a history with the starting point in the 10th century in Europe and America. It has been realized that education of the persons with disability is very crucial for the development and independent leaving as far as possible. Education of the persons with disability has evolved as an essential responsibility of the government not only because of constitutional provisions but also with the UN mandates.

DISTANCE EDUCATION**INTRODUCTION:**

Distance education was an educational mode supplementary, Complementary and alternative to conventional/ traditional system of education depending on the situation it was practised. Today it has evolved into an independent system of education. Thanks to the growth of communication Technologies and cognitive sciences

which are flexible enough to use the technologies for pedagogic purposes. It is an educational innovation to meet the ever increasing and diversified educational needs and demands of the society which are equal to changing social, economic and other conditions on one hand and technological developments on the other. Distance education is innovative in the sense that it sets up its own norms, approaches and methodology which are different from the face-to-face system of education. It can be non-conformist and non-traditional in nature. It makes adequate provision to impart instruction to learners at a distance by incorporating a variety of means for didactic interaction between its students and the teachers and / or the institution. This paper is an attempt to provide the students of education honours some of the fundamental concepts under the purview of distance education

Course Objectives

On completion of this course, students shall be able to

- explain the importance of Distance education in the present context
- describe the historical perspective of distance education
- elaborate the curricular process of Distance education
- understand various modes of student support services
- develop clear idea about different type of Distance education institutions

CONTEMPORARY PEDAGOGY

INTRODUCTION

It is important to note that 'education' is not synonymous with 'school'. It has always been the case that a range of activities that are educational in nature can, indeed should, occur outside the school, even from the earliest age given the educative role of the parents. The Delors Commission Report on education for the 21st century proposed 'learning to live together' as one of the four pillars of education. It advocates learning to live together by developing an understanding of other people and an appreciation of interdependence – carrying out joint projects and learning to manage conflicts in a spirit of respect for the values of pluralism, mutual understanding and peace (UNESCO, 1996). The policy context in India and around the globe is moving towards recognition of the educational value of newer form of pedagogy in the 21st Century which will enable the children to develop critical reasoning power, justify their views, independent decision making power, expression of thoughts, and empathy to others' feelings. Recently NCERT (2005) and NCTE (2009) have changed their curriculum framework and accordingly revised their text books and teacher orientation process to empower the prospective teachers to cope up with emerging pedagogies and to promote higher order learning of the learners like, creative expression, authenticity, abstraction of ideas, and multiple thinking, etc. This paper is intended to give insight to the students on importance of pedagogy in education.

EARLY CHILDHOOD CARE AND EDUCATION

INTRODUCTION

This paper will help the students to develop a sensitivity towards the needs and rights of children and will provide an understanding of their development. Students will also acquire skills that will help them to interact with children. Besides, orienting the students towards a vocation in childcare, this course will orient the students towards organizing services for children. These services are crèches / day care centres and pre-schools for children upto six years of age. Students will enlighten themselves regarding how the pre-school education prepares the child for schooling which lies ahead. Pre-schools in our country are called by various names: anganwadi, balwadi, nursery school, kindergarden and play center.

Course Objectives

On completion of this course, students shall be able to:

- understand the importance of early childhood stage as the formative stage of growth and development
- explain the basic principles of curriculum formulation and their respective growth
- list out the activities for the different type of developmental needs of early child
- elaborate the learning materials needed for their appropriate developmental stage.

Unit – 1 Introduction to childcare and development

- Basic concepts in child development : Scope, growth and development, stages of development, areas of development, significance of study of child development.
- Principles of growth and development.

Unit – 2 Curriculum for ECCE

- Basic principles of the curricular framework
- Areas: cognitive development, language development, social and emotional development, exploring, the environment, habit formation.

Unit – 3 Activities for physical development, movement and mobility.

- Activities for cognitive development
- Activities for language development
- Activities for social and emotional development
- Activities for exploring the environment
- Creative and aesthetic activities.

Unit – 4 Learning materials for ECCE

- Principles of selection of materials
 - Type of materials
 - Specific materials for different activities
 - Preparation of teacher made materials
 - Concept of toy bank
-

Unit – 5 Statutory framework for ECCE

- Constitutional framework
- National ECCE Policy, 2013

Indian Writing in English

Though a late developer, Indian writing in English has been the fastest growing branch of Indian literature. It has delivered a rich and vibrant body of writing spanning all genres. As a 'twice born' form of writing, it partakes of both the native and alien perspectives and has an inherent inclination to be

postcolonial. This paper attempts to introduce the students to the field of Indian writing in English through some representative works.

Unit-I: A historical overview of Indian writing in English the key points of which are East India Company's arrival in India, Macaulay's 1835 Minutes of Education, India's first war of independence and the establishment of colleges to promote Western education. The focus in the literary setting will include Dean Mohammed's travel writing, said to be the first work of Indian English writing, Toru Dutt and Henry Derezio in poetry and Bankim Chandra Chatterjee and Lal Behari Dey in prose fiction.

Unit-II : Crystallization: R.K. Narayan, *The Bachelor of Arts*.

Unit-III : Flowering: R. Parthasarathy (ed) *Ten Twentieth Century Indian Poets*. The following poets and their poems are to be studied.

Nissim Ezekiel, "Good Bye Party for Miss Puspa T.S", "Poet, Lover, Bird Watcher",

Postcolonial Literature

This paper seeks to introduce the students to postcolonial literature—a body of literature that responds to the discourses of European colonialism and empire in Asia, Africa, Middle East, the Pacific and elsewhere. By focusing on representative texts situated in a variety of locations, the paper aims to provide the students with the opportunity to think through and understand the layered response—compliance, resistance, mimicry and subversion—that colonial power has provoked from the nations in their search for a literature of their own.

Unit 1: Concept

- Definition and characteristics: Resistant descriptions, appropriation of the colonizer's language, reworking colonial art forms & etc.
- Scope and Concerns: Reclaiming spaces and places, asserting cultural integrity, revising history

1. Literary Theory**Objective**

The development of theory in the **last** half-century or more is a fact of critical importance in the academic study of literature. Far from being seen as a parasite on the text, theory has been seen as a discourse that provides the conceptual framework for literature. This paper aims to give the students a firm grounding in a major methodological aspect of literary studies known as theory.

Unit 1: Overview

- Crisis in literary criticism and the search for a method
- Rise of theory
- What does it mean to theorise?

Unit 2: New Criticism and Formalism:

With an emphasis on the main critical concepts of **NC** such as paradox, irony, tension, intentional and affective fallacy, heresy of paraphrase and of Formalism such as ostranenie, literariness, foregrounding, dominant and deviant

- *Cleanth Brooks, "The Language of Paradox".
- *Viktor Shklovsky, "Art as Device".

Unit 3: Structuralism and Poststructuralism:

With an emphasis on the main critical concepts of Structuralism such as binary opposition, synchrony and diachrony, syntagm and paradigm and of Poststructuralism such as collapse of the binary, difference, mise-en-abym, erasure

3: Research Methodology

Research methodology is a discipline specific course pitched at a higher level than the generic academic preparatory courses. Research is at the core of every university course starting from the UG to the PhD level. This course is designed to develop the fundamentals of research from creating a questioning mechanism in the students' minds leading up to writing research papers and dissertations. Students learn the methodological issues imperative for conducting research and for research documentation. The course also aims to train students in the essentials of academic and research writing skills.

Unit 1 Research and the Initial Issues

- Research as systematic investigation
- Searching for and locating research questions; Finding the general background about research problem/question: review of existing literature and applicable theories
- Refining the research problem/question; formulating its rationale and objectives
- Writing a research synopsis

Unit 2 Literature review

- Selecting review areas based on the research objectives
- Primary, secondary and tertiary sources, and related theory/s (sources: library, databases, online sources, previous research, archives, media, social/psychological/political/educational contexts, and such others)
- Gathering, reading and analysing literature and related theory
- Writing the review with implications for the research question selected

Unit 3 Hypotheses and formulation of research design

- Formulating hypotheses based on research objectives
- Formulation of research design: qualitative, quantitative, combinatory; steps in research design
Theory application
- Data collection tools: surveys, questionnaires, interviews, observation checklists, review checklists, comparison tools, text analysis tools
- Data analysis and interpretation

Unit 4 Results and documentation

- Preparing tables, charts, and graphs to present data; Collating the findings
- Testing hypotheses; Generalisation of results
- Writing a dissertation; MLA/APA citation: in-text and works cited pages
- Plagiarism and related problems

Unit 5 Practical (for Internal Assessment)

Students will write i. literature review of 1000 words on a research question and ii. a book review of 500 words.

Pattern of examination**Mid-semester assessment**

- literature review of 1000 words on a research question
- A book review of 500 words

PROJECT

MATHEMATICS

+3 FIRST YEAR FIRST SEMESTER CORE COURSE - I (C-1) CALCULUS - I

Time : 3 Hours
Credits : 6

End Semester Theory : 50 Marks
Mid-Semester : 20 Marks

UNIT - I

Hyperbolic functions, higher order derivatives, Leibnitz's Rule and its applications to problems of the type $e^{ax+b} \sin x$, $e^{ax+b} \cos x$, $(ax+b)^n \sin x$, $(ax+b)^n \cos x$. concavity and inflexion points. L-Hospital's rule, applications in business, economics and life sciences.

UNIT - II

Curvature, Assymptotes, Curve tracing in Cartesian coordinates and polar coordinates of standard curves.

UNIT - III

Reduction formulas - Derivation and use in $\int \sin^n x dx$, $\int \cos^n x dx$, $\int \tan^n x dx$, $\int \sec^n x dx$, $\int \log^n x dx$, $\int \sin^n x \cos^m x dx$.

Volumes and areas of surface of revolution, arc length, arc length of parametric curves.

UNIT - IV

Techniques of sketching conics. Reflection properties of properties of conics, rotation of axes and second degree equations, classification into conics using discriminant, polar equations of conics; sphere cone, Cylinder.

UNIT - V

Triple product, introduction to vector functions, operations with vector valued functions, limit, continuity of vector functions, differentiation and integration of vector functions, tangent and normal components of acceleration.

PRACTICAL CALCULUS - I

Mid-Semester : 30 Marks

List of Practicals (Using any software)

Practical/Lab work to be performed on a Computer.

1. Plotting the graphs of the functions e^{ax+b} , $\log(ax + b)$, $1/(ax + b)$, $\sin(ax + b)$, $\cos(ax + b)$, $|ax + b|$ and to illustrate the effect of a and b on the graph.
2. Plotting the graphs of the polynomial of degree 4 and 5, the derivative graph, the second derivative graph and comparing them.
3. Sketching parametric curves (Eg. Trochoid, cycloid, epicycloids, hypocycloid).
4. Obtaining surface of revolution of curves.

5. Tracing of conics in cartesian coordinates polar coordinates.
6. Sketching ellipsoid, hyperboloid of one and two sheets, elliptic cone, elliptic, paraboloid, hyperbolic paraboloid using cartesian coordinates.
7. Matrix operation (addition, multiplication, inverse, transpose).

Books Recommended:

+3 FIRST YEAR FIRST SEMESTER CORE COURSE - II (C-2) - MATHEMATICS ALGEBRA - I

Time : 3 Hours

End Semester Theory : 80 Marks

Credits : 6

Mid-Semester : 20 Marks

UNIT - I

Polar representation of complex numbers, n th roots of unity. Demoivres theorem for rational indicies and its applications.

UNIT - II

Equivalence relations, Functions, Composition of Functions, Invertible Functions, One-to-one correspondence and cardinality of a set, well ordering property of positive integers, Division algorithm, Divisibility and Euclidean algorithm. Congruence relation between integers. Principles of mathematical induction, statement of fundamental theorem of Arithmetic.

UNIT - III

System of Linear equations, row reduction and echelon forms, vector equations, the matrix equation $Ax = b$, Solution Sets of linear systems, Applications of linear systems, linear independence.

UNIT - IV

Introduction to linear transformations, matrix of a linear transformation, inverse of a matrix, charecterization of invertible matrices, subspaces of R^n , dimension of subspaces of R^n .

UNIT - V

Rank of a matrix, Eigen values, Eigenvectors and characteristic Equations of matrix.

UNIT - I

Differential equations and mathematical models. First order and first degree ordinary Differential equations - Variable separable, homogeneous, exact and linear.

UNIT - II

Differential equations of first order but of higher degree. Applications of first order ordinary Differential equations to Growth, Decay, Heat flow, oxygen debt and Economics.

UNIT - III

Second order linear equations - (homogeneous and non-homogeneous) with constant coefficients, with variable coefficients, variation of parameters, method of undetermined coefficients. Equations reducible to linear equations with constant coefficients. Euler's equation, Applications of second order differential equations.

UNIT - IV

Power series solutions of regular and singular parts of second order differential equations, Legendre equations and Legendre polynomials.

UNIT - V

Laplace transforms, Differentiation and Integration of transforms, Application to solutions of Differential equations.

PRACTICAL CALCULUS - II

Mid-Semester : **30** Marks

List of Practicals (Using any Software)

Practical/Lab work to be performed on a Computer.

1. Plotting of second order solution of family of differential equations.

Multivariate Calculus (Cal-II)

Unit - I

Functions of several variables, limit and continuity of functions of two variables Partial derivatives of first and higher orders, differentiability, sufficient condition for differentiability.

Unit - II

Total differentiability and differentials of higher order, chain rule, change of variables, Taylor's theorem.

Unit - III

Extrema of functions of two and three variables, Jacobians, constrained optimization problems, Methods of Lagrange's multipliers.

Vector field, Differential operators, Directional derivatives, Curl, gradient and divergence.

Unit - IV

Integration on R^2 : Line integrals, Double integrals and Repeated integrals, Double integrals over a region, Green's theorem (Statement only), Change of variables.

Unit - V

Integration on R^3 : Line Integrals, Surface integrals, Triple Integrals, Stoke's theorem and Gauss Divergence theorem (Statements only).

Books Recommended:

1. Mathematical Analysis : Malik & Arora : Chapter-15, 16 (Arts 2,3), 17, 18 (Arts 2, 4, 5, 7, 8).
2. A Text Book of Vector Calculus : Shantinayakan & J. N. Kapoor. Chapter - VI (Art 51 - 68)

Books for Reference:

Probability and Statistics

Unit - I : Probability -

Introduction, Sample space, events, Probability axioms and Probability of an event, Some rules of probability, Conditional Probability, Independent events, Baye's Theorem.

Unit - II : Probability Distribution and Probability densities -

Random variables, Probability distributions, Continuous random variables, Probability density functions, Multivariate Distributions, Marginal distributions, Conditional distributions.

Unit - III : Mathematical expectation -

Introduction, expected value of Random variable, moments, moment generating functions, product moments (calculation of covariance) moments of linear combination of random variables, conditional expectation.

Unit - IV : Special Probability distributions and Special Probability densities -

Discrete distributions, The Discrete Uniform distribution, Binomial Distribution, Negative Binomial distribution, geometric distribution, Poisson distribution.

Continuous distributions, Uniform, exponential, normal distributions, Bivariate normal distribution, correlation coefficient.

Unit - V : Regression & Limit Theorems :

Introduction to regression, Linear regression, Introduction to limit theorems, Chebyshev's Inequality and weak law of large numbers, The central limit theorem, The strong law of large numbers.

Books Recommended:

1. John E. Freund's : Mathematical statistics with applications (8th edition) : (Applied Exercises of all chapters are excluded) Chapters : Ch2 (Art 1-8), Ch 3(1-7), Ch4 (1-3, 5-8), Ch5 (2, 4, 5, 7), Ch6 (2, 3 (restricted), 5, 7) Ch-14 (1, 2).

Metric Space and Complex Analysis (Analysis-IV)

Unit - I

Metric spaces: definition and examples, sequences in metric spaces, Diameter.

Open and closed sets : Open and closed balls, neighbourhood, open sets, closed sets, interior, exterior and boundary points, unit points, Dense sets.

Unit - II

Convergence and completeness : Cauchy sequences, complete metric space, cantor's theorem.

Continuity and uniform continuity : Homeomorphism. Sequential and other criterion, Banach fixed point theorem, separable space, connectedness : connected subset of \mathbb{R} .

Unit - III

Real numbers and field of complex numbers (Properties of complex numbers). Regions in complex plane, polar representation and roots of complex numbers, power series (Convergence & absolute convergence) Analytic function (exponential, logarithmic, trigonometric), Derivatives, cauchy-Riemann eqns, Necessary and sufficient condition for analyticity.

Unit - IV

Complex Integration : Power series representation of analytic functions : cauchy's estimate, Zeros of analytic functions; Liouville's Theorem, Fundamental theorem of algebra, Maximum Modulus Theorem, Index of closed curve, Cauchy Theorem (1st version) Chuchy's integral formula (1st and 2nd version), Morera's theorem.

Unit - V

Singularities : classification, Laurent's Theorem (statement only), Residues, Residue Theorem, contours, contour integrals, examples.

Books Recommended:

1. S. C. Mallik & S. Arora : Mathematical Analysis. Ch-19 (Arts 1, 2, 3, 4, 6 excluding 6.1)
2. Dr. S. Arumugam : Complex analysis. Ch-1 (1.1), 2(2.1-2.7, 2.9), 4(4.4), 6, 7 (7.1-7.2).

Linear Programming

Unit - I

Introduction to linear programming problem, Theory or simplex method, optimality and unboundedness, the simplex algorithm, simplex method in tableau format.

Unit - II

Introduction to artificial variables. twophase method, BigM method.

Unit - III

Duality, formulation or the dual problem, primal-dual relationships.

Unit - IV

Transportation problem and its mathematical formulation, northwest corner method.

Unit - V

Assignment problem and its mathematical formulation, Hurgarian method for solving Assignment Problems.

Recommended Books:

Programming in C++ (Compulsory)

Unit - I

Introduction to structured programming: data types-

Simple data types, floating data types, character data types, string data types,

Unit - II

Arithmetic operators and operators precedence, variables and constant declarations, expressions, input using the extraction operator L.G and lin, output using the insertion operator ii and cout, preprocessor directives, increment (++) and decrement(-) operations, creating a C++ program, input/ output.

Unit - III

Relational operators, logical operators and logical expressions, if and if-else statement, switch and break statements. for, while and do-while loops and continue statement.

Unit - IV

Nested control system, value returning functions, value versus reference parameters, local and global variables.

Unit - V

One dimensional array, two dimensional array, pointer data and pointer variables.

List of Practicals (Using any software) Practical/Lab
work to be performed on a Computer.

1. Calculate the sum of the series $\frac{1}{1} + \frac{1}{2} + \frac{1}{3} + \dots + \frac{1}{N}$ for any positive integer N.
2. Write a user defined function to find the absolute value of an integer and use it to evaluate the function $(-1)^n / \dots$ for $n = -2, -1, 0, 1, 2$.
3. Calculate the factorial of any natural number.
4. Read floating numbers and compute two averages: the average of negative numbers and the average of positive numbers.

5. Write a program that prompts the user to input a positive integer. It should then output a message indicating whether the number is a prime number.
 6. Write a program that prompts the user to input the value of a , b and c involved in the equation $ax^2 + bx + C = 0$ and outputs the type of the roots of the equation. Also the program should output all the roots of the equation.
 7. Write a program that generates random integer between 0 and 99. Given that first two Fibonacci numbers are 0 and 1, generate all Fibonacci numbers less than or equal to generated number.
 8. Write a program that does the following:
 - a. Prompts the user to input five decimal numbers.
 - b. Prints the five decimal numbers.
 - c. Converts each decimal number to the nearest integer.
 - d. Adds these five integers.
 - e. Prints the sum and average of them.
 9. Write a program that uses while loops to perform the following steps:
 - a. Prompt the user to input two integers :first Num and second Num (first Num should be less than second Num).
 - b. Output all odd and even numbers between first Num and second Num.
 - c. Output the sum of all even numbers between first Num and second Num.
 - d. Output the sum of the square of the odd numbers first Num and second Num.
 - e. Output all uppercase letters corresponding to the numbers between first Num and second Num, if any.
 10. Write a program that prompts the user to input five decimal numbers. The program should then add the five decimal numbers, convert the sum to the nearest integer, and print the result.
 11. Write a program that prompts the user to enter the lengths of three sides of a triangle and then outputs a message indicating whether the triangle is a right triangle or a scalene triangle.
 12. Write a value returning function smaller to determine the smallest number from a set of numbers. Use this function to determine the smallest number from a set of 10 numbers.
 13. Write a function that takes as a parameter an integer (as a long value) and returns the number of odd, even, and zero digits. Also write a program to test your function.
 14. Enter 100 integers into an array and sort them in an ascending/ descending order and print the largest! smallest integers.
 15. Enter 10 integers into an array and then search for a particular integer in the array.
 16. Multiplication/ Addition of two matrices using two dimensional arrays.
 17. Using arrays, read the vectors of the following type: $A = (12345678)$, $B = (02340156)$ and compute the product and addition of these vectors.
 18. Read from a text file and write to a text file.
 19. Write a function, reverse Digit, that takes an integer as a parameter and returns the number with its digits reversed. For example, the value of function reverse Digit 12345 is 54321 and the value of reverse Digit 532 is 235.

3-Number Theory

Unit - I

Divisibility theorem in integers, Primes and their distributions, Fundamental theorem of arithmetic, Greatest common divisor, Euclidean algorithms, Modular arithmetic, Linear Diophantine equation, prime counting function, statement of prime number theorem, Goldbach conjecture.

Unit - II

Introduction to congruences, Linear Congruences, Chinese Remainder theorem, Polynomial congruences, System of linear congruences, complete set of residues, Chinese remainder theorem, Fermats little theorem, Wilsons theorem.

Unit - III

Number theoretic functions, sum and number of divisors, totally multiplicative functions, definition and properties of the Dirichlet product.

Unit - IV

The Mbius inversion formula, the greatest integer function, Eulers phifunction, Eulcrs theorem, reduced set of residues, some properties of Euler's phi-function.

Unit - V

Order of an integer modulo n , primitive roots for primes, composite numbers having primitive roots, Eulers criterion, the Legendre symbol and its properties, quadratic reciprocity, quadratic congruences with composite moduli.

4.3 Paper X-Global Politics

Course Objectives:

This course introduces students to the key debates on the meaning and nature of Globalization by addressing its political, economic, social, cultural and technological dimensions. In keeping with the

most important debates within the globalization discourse, it imparts an understanding of the working of the world economy, its anchors and resistances offered by global social movements while analyzing the changing nature of relationship between the state and trans-national actors and networks. The course also offers insights into key contemporary global issues such as the proliferation of nuclear weapons, ecological issues, international terrorism and human security before concluding with a debate on the phenomenon of global governance.

INTRODUCTORY PSYCHOLOGY

Introduction:

The course is designed to give the student a basic understanding of the psychology of human behavior. The students will be given exposure to concepts, terminology, principles, and theories that comprise an introductory course in psychology. **Learning Objectives:**

- To help the students to know the sources and processes of development of modern scientific psychology.
- To help the students to develop a scientific temperament in studying and understanding human behavior

Expected outcomes: Students will be able to

- Define the term psychology and demonstrate command of the basic terminology, concepts, and principles of the discipline.
- Gain knowledge of scientific methodology-the variety of ways in which psychological data are gathered and evaluated / interpreted.
- Identify and compare the major perspectives in psychology: Recognize how each approach views human thought and behavior.
- Understand the physiological and biochemical links of human behavior.

UNIT -I Introducing Psychology

- i. Concept and definition of psychology, Roots of psychology, Psychology as a scientific discipline.
- ii. Key Perspectives in Psychology- Behavioral, Cognitive, Humanistic, Psychodynamic, and Socio cultural.

UNIT -II Methods in Psychology

- i. Natural Observation, Survey and Case Study- Nature, advantages and limitations. ii. Experimental and Correlational methods-Nature, advantages and limitations.

UNIT -III Biological Bases of Behavior - 1

- i. Structure and functions of the neurons, Neural Firing, Nerve Impulses, Synaptic Transmission.
- ii. Central nervous system:- Anatomy and Function of: spinal cord, Brain Stem, Cerebellum and Reticular Formation, Anatomy and functions of Fore Brain: Thalamus, Hypothalamus, Limbic system, cerebrum, Lobes.

UNIT -IV Biological Bases of Behavior - 2

- i. Endocrine Glands: Types and Chemical regulation of endocrine glands Role of neuro transmitter
- ii. Peripheral nervous System: Somatic Nervous System, Autonomic Nervous System; Structure and Function of sympathetic and parasympathetic Division

UNIT -V States of Mind

- i. Nature of consciousness ; changes in consciousness- Sleep-wake-schedules, ii. Extended states of consciousness- Hypnosis, Meditation and Hallucinations.

PRACTICAL

PSYCHOLOGICAL STATISTICS**Introduction:**

The course is to designed to equip students with knowledge in the fundamentals of statistics and research methods so that they understand the application of statistics to different research problem in psychology.

Learning Objectives:

- To help students develop knowledge and understanding of the application of statistics within Psychology.
- To help students develop Critical Thinking for application of appropriate statistical analysis in Psychological research.

Expected outcomes: Students will be able to

- The nature Psychological variables and how to measure them with appropriate scale.
- The processes of describing and reporting statistical data.
- The methods of drawing inferences and conclusions for hypothesis testing by using appropriate statistical analysis.

UNIT -I Fundamentals of statistics

- i. Meaning and scope of statistics, Nature of variables- Categorical and Continuous, Levels of Measurement- Nominal, Ordinal, Interval, and Ratio
- ii. Drawing frequency distribution; Graphical representation of grouped data-Polygon, Histogram, Ogive

UNIT -II Measures of Statistics

- i. Measures of Central Tendency- Characteristics of mean, median and mode; Computation of mean, median, and mode
- ii. Measures of Variability- Concept of variability, computation of semi-inter quartile ranges, Standard deviation and variance.
- iii. Percentile & Percentile Rank, Percentile Curve

UNIT -III Sources and Applications

- i. Concept of Probability; Characteristics of Normal Probability curve, Applications of NPC, Deviation from NPC- Skewness and Kurtosis
- ii. Concept of correlation, Product-moment correlation (ungrouped data), Rank order correlation

UNIT -IV Hypothesis Testing

- i. Steps in Hypothesis testing, Computation of 't' for independent and dependent samples.
- ii. Purpose and assumptions of ANOVA; One-way ANOVA

UNIT -V Non parametric Statistics

- i. Assumption of parametric statistic test and Non parametric statistic test chisquare.
- ii. Kruskal-Wallis H test; The Mann-Whitney U test.

RESEARCH PROJECT

Introduction:

The research experience of students is greatly enriched by early exposure to conducting research. There are numerous benefits of undergraduate students who get involved in research. They are better off in understanding published works, determine an area of interest, can discover their passion for research and may start their career as a researcher. Further students will be able develop ability for scientific inquiry and critical thinking, ability in the knowledge base and communication of psychology. This course is included to promote above mentioned abilities among the students.

Learning Objectives:

- To help students to learn how to develop scientific research designs in the study of psychology.
- To guide students to understand the previous research in their field of interest and review them to arrive at a research problem
- To encourage the students to learn ways to describe and measure human behavior.
- To help students understand the logic of hypothesis testing and application of appropriate statistical analysis.
- To make students to learn the methods of writing a research report.

Expected outcomes: Students will be able to

- Independently prepare a research design to carry out a research project
- Review the related research papers to find out a research problem and relevant hypotheses
- Understand the administration, scoring and interpretation of the appropriate instrument for measurement of desired behavior
- Learn the use of statistical techniques for interpretation of data.
- Learn the AP A style of reporting a research project.

Unit I :

A student is required to carry out a project on an issue of interest to him / her under the guidance and supervision of a teacher. In order to do so s/he must have the knowledge in research methodology and of steps in planning and conducting a research. The supervisors may help the students to go on field study /

study tour relevant to their work. Thirty hours of class may be arranged in the routine to help students understand research methodology, and planning, conduction and reporting on the research. An external examiner with the supervisor as the internal examiner will evaluate the research project on the basis of scientific methodology in writing the report, and presentation skill and performance in the viva.

• **Format**

- > **Abstract** - 150 words including problem, method and results.
- > **Introduction** - Theoretical considerations leading to the logic and rationale for the present research
- > **Review**- Explaining current knowledge including substantive findings and theoretical and methodological contributions to the topic, objectives and hypotheses of the present research
- > **Method** - Design, Sample, Measures, Procedure
- > **Results**- Quantitative analysis of group data- (Raw data should not be attached in Appendix) Graphical representation of data wherever required- Qualitative analysis wherever done should indicate the method of- qualitative analysis.
- > **Discussion**
- > **References (APA Style) & Appendices**
- Project should be in Soft binding. It should be typed in Times New Roman 14 letter size with 1.5 spacing on one side of the paper. Total text should not exceed 50 pages (References & Appendices extra).
- Two copies of the project should be submitted to the College.

SOCIOLOGICAL THOUGHT

Sociology originated as an intellectual response to the crisis confronting the mid nineteenth century European society. Its development over two centuries has been influenced by a variety of socio-economic and political conditions. It is now established as a multi-paradigmatic academic discipline, with its body of theoretical knowledge enriched and its methodological techniques and procedures systemized. This paper is intended to familiarize the students with the social, political, economic and intellectual contexts in which sociology emerged as a distinctive discipline. It reflects the philosophical contributions of the Founders who gave a systematic shape to the subject.

Objectives : After going through this paper, the student can

- Gain an understanding of some of the classical contributions in Sociology, and their contemporary relevance.
- Learn about the methodological shift in the discipline over the years.

Learning Outcomes: This paper is expected to clarify and broaden the student's knowledge about the theoretical and methodological contributions of the classical contributors to the subject and the contemporary relevance of these theories.

RESEARCH METHODOLOGY

Since the days of August Comte, a debate and a deliberate attempt has been initiated to provide a scientific character to social sciences. In this attempt empirical research has been introduced as an integral part of observing social reality and generalizing it objectively without any subjective predisposition. Gradually, research methods have been developed and introduced in social sciences to bring it in par with scientific observations. The essence of this paper lies in introducing the students with these methods of research to ensure objectivity as far as practicable in social research.

Objectives : By going through this paper, the student can

- Get an understanding of the nature of scientific methods, nature of social Phenomena and the way of attaining value neutrality.
- Have a grip over the basic steps involved in social research and the types of social research with their applicability
- Develop an insight into the need and types of research design and the use of sampling method for attending objectivity.

Learning Outcomes : This paper is designed to acquaint the students with the scientific ways of studying social phenomena. This provides them with a research insight that will enable them to capture the most relevant data in an objective manner. The market demand of this paper will be very high as the students well versed with this paper will be highly demanded in academics, fundamental research, and policy research undertaken both by Government and Non- Government agencies.

Unit-1 : Meaning and Significance of Social Research: Nature of scientific Method, Applicability of scientific method to the study of social phenomena. Major steps in social research.

Unit-2 : Research Design: Types of Research Design: Exploratory, Diagnostic, Descriptive, and Experimental research Design.

Unit-3 : Hypothesis: Meaning, Characteristics, Types and sources of Hypothesis, Role of Hypothesis in Social Research

Sampling: Meaning, and characteristics. Types: Probability and Non-Probability Sampling. Role of Sampling in Social Research

GENDER AND SOCIETY

The biological basis to the differences between the sexes does not explain the inequalities faced by the sex groups in the society. In the society variations are marked in the roles, responsibilities, rights of and relations between sex groups depending on the social prescriptions relating to sex affiliations. The differences, inequalities and the division of labour between men and women are often simply treated as consequences of 'natural' differences between male and female humans. But, in reality the social norms, institutions, societal expectations play a significant role in deciding and dictating the behavior of each sex group. This is the crux of the study of Gender and Society.

Objectives: After studying this paper, the student can

- Conceptualize what is "Gender" and what is "Sex" and draw a line of distinction between the two.
- Note the difference in gender roles, responsibilities, rights and relations.
- Trace out the evolution and institutionalization of the institution of "Patriarchy".
- Get to know the theories of Feminism that brought women issues and demands to the forefront.
- Assess the initiatives undertaken for gender development with the paradigm shift from time to time.

Learning Outcomes: This paper is expected to generate ideas and sensitivity about gender in a student which he/she can put into practice in daily life. This will lead to change the prevalent biases and gender practices and create a gender neutral social world where both men and women can enjoy their basic rights and cherish to achieve their dreams.

Unit-1 : Social Construction of Gender : Sex and Gender, Gender stereotyping and socialization, Gender Role and Identity, Gender stratification and Inequality, Gender discrimination and Patriarchy.

Unit-2 : Feminism: Meaning, origin and growth of Feminist Theories, Theories of Feminism : Liberal, Radical, Socialist, and Eco-Feminism.

ENVIRONMENT AND SOCIETY

Environment and society are in constant interaction with each other. It is the environment which sustains life in society and it is the society that is responsible for the preservation and the degradation of the environment. In the recent years environmental challenges have posed a threat to the lives on the planet. Keeping this in view, the present paper tries to create awareness among the students about the major environmental issues and the efforts geared to tackle them.

Objectives: After going through this paper, the student can

- Derive knowledge about the close interaction between society and environment.
- Gain substantial idea about the environmental issues and their repercussions on humanity.
- Accumulate ideas about the ideological currents, issues that drive environment movements.
- Get aware about the global and national efforts to conserve environment.

Learning Outcomes: The very aim of this paper is to disseminate knowledge about the significance of environment for society, to change the practices that can protect and preserve the environment and to make the students participate in the mission to preserve, protect and promote the cause of environment.

UNIT - I Environment and its Concepts: Ecology, Eco-system, Environment and Society-their inter-relations.

UNIT - 2 Environmental Issues: Sustainable Development, Industrialization and Development, Urbanization and Development, Environmental Degradation.

UNIT-3 Environmental Movements: Chipko Movement, Narmada Bachao Andolan, Ganga Bachao Abhyan, the Silent Valley Movement, Forest Rights.

UNIT- 4 Contemporary Environmental Problems: Problems of Water, Deforestation, Urban Wastes, Slums, Global-Warming and Climate Change.

SOCIOLOGY OF HEALTH

It is increasingly felt that health is not exclusively conditioned by the biological functioning of the body, but to a great extent by the social environment and the social practices and habits. Both the physicians and common people have come to realize the tremendous role of social determinants in ensuring a healthy life to an individual and to the community at large. This has necessitated the development of a special branch of sociology that is Sociology of health. This paper is designed to bring awareness among the students about the social determinants of health and how the health of a community can be changed by bringing a change in the perception, attitude and practices of the people.

Objectives : After going through this paper, the student can

- Understand the social basis of health and health care
- Relate cultural practices to health problems
- Get an idea about the common occupational health hazards
- Comprehend the health sector measures introduced by the Government.

Learning Outcomes: The very aim of this paper is to impress upon the students of sociology the role of social forces in ensuring health to the people. By going through this paper they can serve as the active agents in bringing health sector reforms among the people by awareness building and changing the practices that are fatal to human health.

Unit-I: Sociology of Health - Meaning and Emergence of Sociology of Health, Sociological perspectives on Health - functional, conflict, symbolic interactionist and feminist, The Scope of Health Sociology in India.

Unit-2 : Diseases and Means of Control: Meaning of Diseases, Types of Diseases -occupational diseases and their prevention, Lifestyle diseases, Diseases among women, Means of control: Education, Habit formation, Regular checkups, Avoiding obsolete habits, Changing people's perception and increasing participation in health programmes.

Unit-3 : Common Health problems in India - Social determinants of human health. Causes and consequences of Common health problems - infant mortality and morbidity, maternal mortality, Malnutrition.

Unit-4 : Health Sector Reforms of the Government of India: Protective, Promotive, Reproductive, Curative efforts, Health Policies of The Government, Role of ICDS in ensuring health to women and children.

Unit-5 : Emerging health issues: HIV AIDS, Sex education, Gerontology and Geriatric, Problems to Environmental Sanitation.

POPULATION STUDIES

Demography is both an index and instrument of development and change. India as a country is plagued by population explosion which retards, the economy and blocks social progress. Irrespective of several positive attempts undertaken by the government, India has failed to control its population problem. This paper is designed to provide an idea to the students about population dynamics and its impact on society.

Objectives : After going through this paper, the student can

- Understand the various facets of population studies and the theories that depict population change.
- Develop specific idea on Indian population structure, policies adopted and programmes launched in the country to check population.
- Assess the role of various agencies in population control.

Learning Outcomes: The very aim of this paper is to acquaint the students with a perennial problem of the Indian society that is population growth and the measures introduced to control it.

UNIT-1 : Population Studies: Meaning, Scope and Significance; Demographic Processes: Fertility, Mortality and Migration.

UNIT-2 : Population Theories: Malthusian, Demographic Transition and Optimum Population Theory.

UNIT-3 : Population Composition in India: Age Structure, Sex-Ratio, Rural-Urban Composition, Literacy in India.

URBAN SOCIOLOGY

Urbanisation is an important social process that changed the face of human civilization. It was initiated with the process of modernization, transport revolution, coming up of river valley civilizations, establishment of trade links and industrial revolution. Urbanisation has brought both prosperity and problems. It is one of the earnest tasks of Sociology to trace out the evolution of the process, social; problems associated with it and policy planning and measures undertaken to overcome these challenges. This paper Urban Sociology concentrates upon these tasks.

Objectives : After going through this paper, the student can

- Understand the specific traits of urban areas, its historical patterns of growth.
- Develop knowledge about urban social institutions and problems
- Gain insight into urban development plans, programmes and efforts.

Learning Outcomes: The very aim of this paper is to acquaint the students with the process of urbanization, to give an impression about the pattern of evolution of cities, urban institutions, their contrasts with rural institutions, urban problems and the responses developed to arrest them.

Unit-1 : Urban Sociology: Meaning, Scope and importance of urban sociology, Rural Urban Differences: Specific traits of rural world vs. urban world - Socio-cultural differences, Rurbanization, Urbanism as a way of life.

Unit-2 : Theories of patterns of city growth: Concentric zone theory, Sector model, Multiple nuclei theory.

Unit-3 : Social institutions of Indian urban communities: Family, marriage and kinships in urban India, Caste in urban India.

SOCIOLOGY OF SOCIAL INSTITUTIONS

Social institutions play a significant role in the functioning of a society by regulating the activities of the individuals and fulfilling their needs. Though they are universal to every society, they are not uniform in their characteristics and in terms of the norms they prescribe. They vary from society to society and across cultures. The present paper is designed to introduce to the students the basic social institutions which are fundamental to the lives of the people and significant to the functioning of the society.

Objectives: After going through this paper, the student can

- Understand the basic institutions which are vital to the functioning of the society.
- Learn the variations in the structure and functioning of these institutions across time and societies.
- Get an idea about the emerging features of these institutions.

Learning Outcomes: The very aim of this paper is to impress upon the students the vital role played by the institutions in social life, their typologies and changing features and functions.

Unit-1 : Major Institutions of Society: Community, Groups, Institutions and Organizations.

Unit-2 : Family, Marriage and Kinship: Key concepts; Different forms of family and marriage; Changes in family pattern worldwide; Importance of Kinship.

Unit-3 : Religion: Defining religion; Varieties of religion; Theories of religion.

Unit-4 : Education : The development of Literacy and schooling; Gender and the education system; Education and ethnicity; Theories of Schooling; Education and cultural reproduction; Education and inequality.

INTRODUCTION TO SOCIOLOGY

This introductory paper intends to acquaint the students with Sociology as a social science and the basic concepts used in the discipline. It also focuses on the social processes and the social institutions that man encounters as a member of the society.

Objectives: After studying this paper, the student can

- Get to know the convergence and divergence of Sociology with other social science disciplines in terms of the subject matter, nature and scope of the discipline and its approach.
- Develop knowledge about its historicity.
- Get acquainted with the basic concepts used in the subject.
- Generate ideas about the social processes and social institutions man encounters as a member of the society.

Learning Outcomes: This paper is expected to clarify and broaden the student's notion about the subject, the basic concepts used and some universal societal processes. This will provide a wholesome picture about what the subject is all about.

Unit-1 : Sociology: Meaning and Definition, Nature and Scope, Emergence of Sociology, Sociology and its relationship with Anthropology, Political Science, Economics, and History

Unit-2 : Basic Concepts: Society, Culture, Community, Institutions, Association, Status and Role, Social Norms and Values.

- Unit-3 : Individual and Society** : Individual and society, Socialization - stages and agencies, Development of Self - contributions of George Herbert Mead, C.H. Cooley's Looking Glass Self, Social Group: Types of Groups - Primary and Secondary, In-Group and Out-group, Reference Group.
- Unit-4 : Social Stratification:** Meaning and definition, Dimensions of, Stratification, Theories of Stratification- Functionalist, Marxist, Weberian.
Social mobility: Meaning of Social Mobility and its determinants.
- Unit-5 : Social Control:** Meaning and types of Social Control - Formal and Informal social control, Agencies of Social control.
Social Processes: Associative and Dissociative processes - Cooperation, Assimilation, accommodation, Competition, and conflict.

INDIAN SOCIETY

Every society has its own peculiar structure. There are some institutions universal to every society, but with their unique (manifestations in each society). There are some change agents and initiatives that enable the society to change with the passage of time. This paper introduces to the students the structural elements of the Indian society, its institutions and the change agents.

Objectives : After studying this paper on Indian society, the student can

- Get an impression about the basic composition of Indian society, its historical moorings, basic philosophical foundations and the institutions.
- Learn about the changing institutions, the processes, the agents that bring about change in the Indian society.

Learning Outcomes: This paper is expected to bring familiarity in a student about Indian society. It will present a comprehensive, integrated and empirically -based profile of Indian society. It is hoped that the structure and processes operative in the society, the change agents operating in Indian society presented in this course will also enable students to gain a better understanding of their society.

Unit-1 : Composition of Indian Society : Cast, Religion, Tribe, Language as compositions to Indian society. Unity in Diversities. Threats to National Integration-Casteism, Communalism, Regionalism, Linguism.

Unit-2 : Historical moorings : Bases of Hindu Social Organization: Varna, Ashrama and Purushartha. Doctrine of Karma.

- Unit-3 : Marriage and Family in India.** Hindu marriage as Sacrament, Forms of Hindu Marriage, Changes in marriage. The Hindu joint family: feature, function, dysfunction and recent changes. Marriage and family among the Muslims.
- Unit-4 : Caste and tribe in India:** Origin, Features and Functions. Caste and Class, The Dominant Caste, Changes in Caste system, Tribes of India features and distribution. Constitutional and legal provisions for the Scheduled Castes, Scheduled Tribe.
- Unit-5 : Social Change in Modern India :** Sanskritization, Westernization, and Modernization.

UNIT-I

Random variables: Definition, properties, probability mass function, probability density function; distribution function, joint, marginal and conditional distributions.

UNIT- II

Mathematical expectation of a random variable and its properties, moment generating function, cumulant generating function and probability generating function.

UNIT-III

Characteristic function (simple applications), *convergence* in probability, *convergence* in distribution. Hally-Bray theorem and its application.

UNIT-IV

Multivariate Data: Multiple and Partial correlations and plane of regression (three variables only).

UNIT-V

Analysis of categorical Data: Consistency of categorical data, independence and association of attributes.
